

ODBC

The key to successful decision making is real-time access to critical business information. NetSuite's ODBC feature allows you to analyze your data and interpret the information that's important to you. This feature provides you with access to your NetSuite database through ODBC, a standard database access method, allowing you the flexibility to use any ODBC compliant application to generate specialized reports.

Key Benefits

- **Establish a secure connection to your NetSuite information**
 - Access accounting, CRM, payroll, custom record, and all other tables quickly and easily
- **Define company and industry specific reports based on real-time data**
 - Query and link information from over 150 data views
 - Format, sort and analyze data to meet your exact requirements
 - Benchmark your company's performance against industry standards and competitors
- **Use any ODBC compliant application to gain visibility into your business**
 - Retrieve data using Microsoft Office, Crystal Reports, Business Objects, Actuate, and hundreds of other ODBC compliant applications
 - Take advantage of advanced reporting capabilities and skill sets offered by leaders in the industry

Here's how it works

- Download and install the NetSuite ODBC driver and an SSL (secure socket layer) encryption package on your computer.
- Use an ODBC-compliant application to connect to the NetSuite database and log in using your NetSuite login e-mail address and password.

What will I need to get started?

- NetSuite's ODBC module
- An ODBC compliant business intelligence package
- Installing and using the ODBC driver currently requires a client computer running Microsoft Windows
