 - Standard and Custom KPIs
 - Standard and Custom Report Snapshots

Custom Code

- Data Manipulation
 - Validation
 - Calculations
 - Process Flows

NetSuite is the World's Most Customizable and Extensible Application Service

NetSuite's NetFlex technology platform customizes and extends NetSuite to meet your specific company and industry requirements for personalization, business processes and best practices. And with NetFlex, you can build entire applications hosted within NetSuite. No on-demand application service is more customizable or extensible.

NetFlex AppBuilder allows you to create new applications built and hosted within NetSuite. It also lets you organize navigation links and Real-time Dashboards via center tabs. With NetFlex, you can fundamentally alter NetSuite's Web-native, on-demand products with the addition of database tables via custom records. NetFlex uses standards-based, custom JavaScript code that adds powerful validation and business process enforcement. Best of all, NetFlex customization is all done in-system and fully integrated, improving performance and removing implementation and maintenance headaches.

NetFlex Custom Records allow you to create entirely new records specific to your company and industry business practices. NetSuite is the first hosted solution that allows you to create one-to-one, one-to-many, and many-to-many relationships among standard and custom records.

NetFlex Center Tabs allow you create entirely new tabs in your custom centers. You can manage navigation, including links to add and edit. You can also use the integrated menu system. You get the same user-friendly dashboard capabilities, including eXtreme list editing, configurable and custom KPIs, as well as standard and custom report snapshots.

NetFlex Custom Code lets you perform hardcore data manipulation for validation, automated calculations, and process flows, tailored to your company and industry business practices. NetFlex Custom Code is based on industry standard JavaScript instead of proprietary tools that are constraining and expensive.

Never settle for a "one size fits all" hosted application solution. As a complete system, NetSuite with NetFlex requires no customization or integration for invoices, projects, and billings that would normally require heavy customization and integration in other CRM systems. You'll gain the inherent efficiencies of a hosted, on-demand solution and a robust application architecture. NetSuite gives you the industry's only guaranteed uptime of 99.5 percent, which has proven cost-prohibitive for other vendors. NetFlex lets you leverage the native power of common, shared objects such as dashboards, search, roles and permissions.

NetFlex custom applications also carry forward seamlessly with upgrades, giving you all the benefits of new product features as they come out and none of the headaches of the customization of the past.
