 - Custom Forms and Sub-Tabs

NetSuite is the World's Most Customizable and Extensible Application Service

NetSuite's NetFlex technology platform customizes and extends NetSuite to meet your specific company and industry requirements for personalization, business processes and best practices. And with NetFlex, you can build entire applications hosted within NetSuite. No on-demand application service is more customizable or extensible.

NetSuite's customization technology makes our solution as customizable as traditional, on-premise enterprise applications. In fact, NetSuite is more customizable than other on-demand solutions including salesforce.com and Siebel CRM OnDemand.

NetFlex makes customization simpler with point-and-click personalization and configuration. It's also simpler to implement and maintain because it's managed in one system; NetFlex customization is in-system and fully integrated, removing implementation and maintenance headaches.

NetFlex Personalization lets you tailor your role-based Dashboards and saved searches to put business intelligence at your fingertips. NetFlex also gives you drag-and-drop layout of your Dashboard, corporate branding, and personal colors, as well as publishing schemes to control the amount of configuration you want to allow users on their Dashboards.

NetFlex Configuration allows you to re-name records, and use your company and industry terminology throughout NetSuite. You can create new custom centers using intranet publishing. You can create new record sub-tabs and change list views. You can also easily make object changes with point-and-click custom forms and custom fields.

NetFlex makes NetSuite your company's very own personalized solution, complete with your terminology, corporate branding, key data points, and business processes, so there's no more settling for a "one-size-fits-all" hosted application solution.

NetSuite has created breakthrough technology that overcomes the hurdles of customization through clicks, not code. Personalization and configuration capabilities are point-and-click-enabled. Plus, it includes simple database field additions.

These technological advances enable companies to benefit from seamless customization migration, which is handled entirely by NetSuite. As a result, you can carry forward your changes with the latest product capabilities-without cost and without headaches.
