

SuiteCommerce

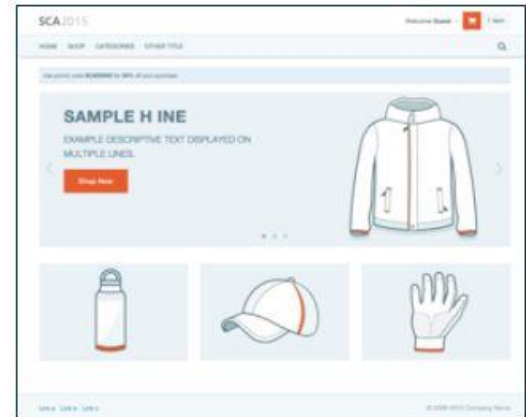

## SuiteCommerce Advanced Denali Release

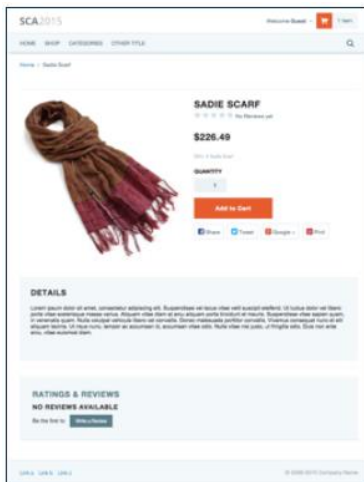

The SuiteCommerce Advanced Denali release consists of a major re-architecture of the SuiteCommerce Reference application to provide better performance, increased flexibility and more control over the implementation and development process.

The Denali release does not include any core “features”, but the new changes enable customers, professional services and partners to more efficiently manage, build and deploy SuiteCommerce implementations.

Additionally, the new user experience takes a Mobile First approach with a re-designed user interface, and NetSuite continues to provide advanced SEO solutions for site tracking and analysis.

## Key Highlights

**One Bundle:** The organization and delivery of the main source code was consolidated from 3 bundles (ShopFlow, My Account and Checkout) into one core SCA bundle.

**Modular Code Architecture:** The source code is arranged into functional components (i.e. modules) for better separation and organization of the code base. In addition, module directories are now versioned.

**Developer Tools:** Integrated developer tools provide an efficient local development and build process.

**Mobile First UX & Visual Design:** Updated the out-of-box UX and visual design with a mobile first strategy.

**Developer Portal:** The new developer portal is an epicenter of innovation and resources for all things SuiteCommerce. The portal is organized into two main areas: Design Resources and Developer Resources.

## Customer Benefits

### One Bundle

- Improved efficiency in making global CSS and template changes
- Reduced complexity of customizations
- Faster and more consistent implementations

### Modular Code Architecture

- Improved agility and flexibility
- Increased efficiency to manage and customize
- Versioning of modules improves the ability to integrate new bundles into existing implementations

**Developer Tools**

- Modern local development process
- Reduces learning curve of SuiteCommerce due to a development process aligned with industry best practices
- More control over how application is built and where it's deployed
- Opportunity to extend additional development tasks/workflows
- Tools can be customized to match each developers own workflow

- Ability to use a revision control system to manage changes to the application across multiple teams

**Mobile First UX & Visual Design**

- Faster and higher performing sites
- Enhanced user experience by providing more focused design

**Developer Portal**

- Provides designers, developers and partners a modern learning center
