

SuiteCommerce Reference Bundles

Best-in-Class Starting Point for the Creation of Your Commerce Experience

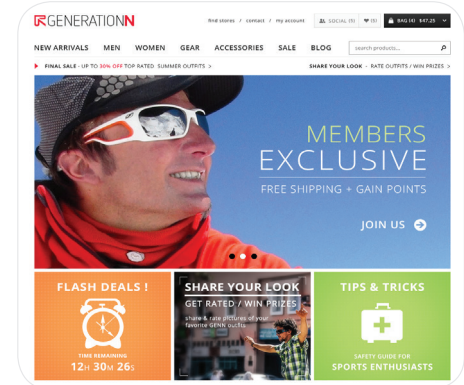

KEY BENEFITS

- Get total flexibility with pixel-perfect design capabilities and unlimited layout control to deliver uniquely branded and engaging shopping experiences
- Optimized web stores for any device, including desktops, mobile and tablets through responsive web design
- Rapidly build new shopping experiences that meet the changing demands of shoppers

NetSuite SuiteCommerce Reference bundles provide a best-in-class starting point site that enables the delivery of highly engaging shopping experiences to drive conversion and grow your business. Site owners, developers and designers can use the supplied code to build shopping experiences as an out-of-the box solution with little or no customization, or use the code as the cornerstone to customize the experience.

Reference Shopping

The SuiteCommerce Reference Shopping bundle supports pixel-perfect design capabilities, unlimited layout control and the ability to provide rich commerce experiences across all devices and touchpoints. The Reference Shopping bundle is supported on the NetSuite SuiteCommerce Advanced web store platform. The following features are included:

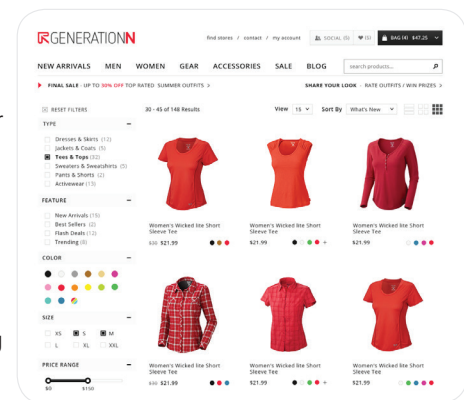

SUITECOMMERCE CUSTOMERS

WineMarket

ORLEBAR BROWN

- **Solr site search.** The open source enterprise search platform provides lightning fast and relevant search results. Customize search criteria and settings (exact, starts with, partial or fuzzy) to optimize results.
- **Instant results.** Anticipate customer needs and facilitate discovery by providing instant search results based on a customer's entered search terms. Instant search allows shoppers to view the top matching search results based on keywords entered in the global search box.
- **List page display options.** Tailor the browsing experience by providing customers multiple display options of your list page. Shoppers can choose to see items displayed in a grid of one across, two across or three across.
- **Guided navigation.** Fast and intuitive faceted navigation enables shoppers to quickly and effortlessly find products by narrowing items by categories and attributes including price and color. Get full control over the display and order of the facets and set facets to function either as a single-select or multi-select facet.
- **Quick view.** Allow customers to quickly and easily view detailed information about any item within a Quick View. A Quick View lightbox provides shoppers the most important information for making a purchase including imagery, pricing, product description and the ability to add the item to their cart.
- **Customer reviews.** Engage and empower your online community by providing a platform for brand enthusiasts to share their insights and experiences about your products. Site owners can approve or deny reviews before publishing to the live shopping site. In addition to the overall star rating, site owners can include additional item attributes (e.g., quality, value, speed) that can be rated.
- **Mini cart.** Shoppers can view a summary of their shopping cart from any page on your site.

KEY FEATURES

- Built on a modern, scalable and extendable HTML and JavaScript architecture
- Includes HTML and CSS templates, JavaScript libraries (jQuery.js, Bootstrap.js, Underscore.js and Backbone.js) and SuiteScript Service files
- Powerful Solr site search provides fast and relevant search results

- **Product imagery.** Showcase your product imagery through an enhanced product gallery of multiple alternative images and image zooming capabilities.
- **Social sharing.** Increase user engagement by allowing content to be shared to popular social platforms such as Pinterest, Facebook, Twitter and Google+. In addition, the AddThis social plug-in can be leveraged to provide additional sharing buttons and capabilities.
- **Responsive design.** Use responsive design to build sites that display elegantly across all devices including desktops, mobile and tablets. Supports a flexible grid-based layout, flexible images and media queries.

Reference My Account

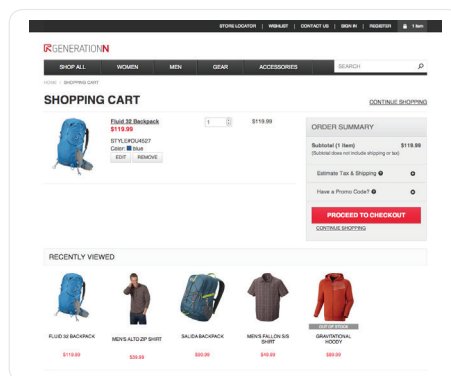

The SuiteCommerce Reference My Account bundle provides shoppers with a self-service customer center to manage all aspects of their shopping experiences. The Reference My Account bundle is supported on both the NetSuite SuiteCommerce Advanced and NetSuite SuiteCommerce Site Builder web store platforms. The following features are included:

- **Order history and details.** Provide full access into order history and details of every sales order, including billing, shipping and payment information as well as order status. Shipping information is provided along with tracking links. All items can be easily reordered from the order history or details page.
- **Address management.** Enable shoppers to easily manage multiple shipping and billing addresses, and set their default shipping and billing addresses for faster checkout.
- **Credit card management.** Securely store and easily manage multiple credit cards that can be used during the checkout process.
- **Profile and password.** Shoppers can manage their personal information including passwords.

Reference Checkout

The SuiteCommerce Reference Checkout bundle provides a flexible and fast checkout experience. The modular architecture encapsulates each step of the checkout process, providing full flexibility of the checkout flow that allows for a true single page checkout or a more guided step-by-step checkout experience. The Reference Checkout bundle is supported on both the NetSuite SuiteCommerce Advanced and NetSuite SuiteCommerce Site Builder web store platforms. The following features are included:

- **Guest checkout.** Allow shoppers the flexibility to choose to check out without registration.
- **Saved shipping, billing and credit card information.** Provide faster and more efficient checkout experiences by allowing customers to save preferred credit cards, shipping and billing addresses.
- **PayPal.** Enable shoppers to pay via PayPal Express within the shopping cart and offer PayPal as a payment option within the checkout flow.
