

## IQity Advanced Manufacturing for NetSuite

### Business Benefits

#### *Built for NetSuite . . . Value*

Built native on NetSuite platform  
Improve user adoption  
Certified fully integrated solution

#### *Improve . . . Profitability*

Lean Six Sigma Centric  
Accelerate improvement initiatives  
Reduce conversion cost by up to 12%

#### *Real-time . . . Performance Management*

Includes Quality management  
Increase OEE, Productivity and more  
Boost Material Yield/Quality up to 8%

#### *Impact . . . Cost, Quality, Service & Performance*

Real-time...focus on the critical few  
Product and regulatory compliance

### Differentiators

- Full advanced manufacturing execution system (MES) capabilities
- Simplifies the complexity of operations
- Integrated bar code scanning / wireless data capture options.
- Rough-cut Capacity Planning and Finite Scheduling
- Manufacturing information and intelligence
- Built for OneWorld Accounts
- Starting as low as \$40 / user / month

**IQity Solutions, LLC**, is a leading Manufacturing in the Cloud solution provider. Our comprehensive Advanced Manufacturing for NetSuite is certified 'Built for NetSuite' and can be configured for small to large enterprises. Our solution extends native NetSuite functionality to assist customers with improving business value through reduced operating costs, increased revenue and overall better management control of their business and supply chain processes.

What does IQity Advanced Manufacturing for NetSuite do?

- Resource Capacity Planning and Finite Production Scheduling
- Enhanced Work Order Management / Monitoring
- Extends ERP systems - connects top floor to shop floor
- Streamlines operations and quality management into one complete system
- Discrete / Process / Batch environment with Recipe or Formulation management
- Real-time Schedule Update and Work Order Tracking
- Real-time Manufacturing Performance Metrics: Schedule Attainment, % Efficiency, Quality, Downtime, etc.

What are the Benefits?

- Reduce 'Cost to Produce' through improve manufacturing execution
- Improve operational and quality performance
- Get more value out of your NetSuite investment
- Unify you Plant to Enterprise (P2E)
- Go global, go mobile, and go live in weeks.
- Integrate manufacturing information and intelligence.

**Built for NetSuite** – IQity extends native NetSuite functionality to unify all your disparate manufacturing systems into one powerful and integrate manufacturing execution system. With IQity Advance manufacturing capabilities and integrated shop floor data collection functionality we can help you get maximize value out of your NetSuite investment. Together IQity and NetSuite represent the future of Manufacturing in the Cloud capabilities.

**IQity Manufacturing Bundle Editions:**

**Small Business:** minimum of 10 users for small businesses or single site locations.

**Mid-Market:** full power middle market, multi-site solution

**Enterprise:** advanced solutions for complex and multi-site enterprise.

**Options:** advanced options for specialized or complex environments

**IQity** employs a advanced architecture utilizing data integration, robust analytics, monitoring and reporting technology to deliver critical information within seconds of an event occurring.

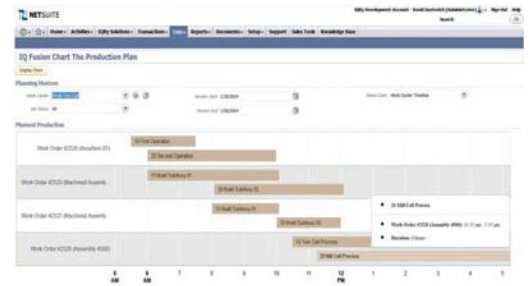

**IQity** provides collective intelligences giving you the confidence to act!

**OneWorld Support** – For complex and multi-site enterprise IQity is built to support OneWorld accounts. By using native NetSuite functionality you are able to manage all your manufacturing requirements needs in on centralized location. Our bundle can easily scale to support your evolving business needs.

**IQity Manufacturing Center** – IQity provides a manufacturing center that allows one centralized location by which to easily navigate to all advanced manufacturing functionality, speeding user adoptions. Links to Capacity Planning, Production Scheduling, Quality, and more are all accessible from one simplified menu providing manufacturers the ability to effectively plan their shop floor and supply chain activities, culminating in lower operating costs.

**Master Production and Finite Scheduling** – For customer requiring more than an infinite view of capacity IQity provides a robust Master Production Scheduling Suitelet that provides a detailed time phased schedule (finite) based on the business rules and scheduling logic defined in IQity's manufacturing workbench records.

**Rough-Cut Capacity Planning** – IQity's RCP Suitelet allows manufacturers to translate either Sales Orders or Demand Plans into a capacity utilization or work center load analysis. Rough-cut capacity is analyzed both at the equipment and labor resource level allow manufacturers the ability to balance demands against available capacity.

*Work Center Utilization*

Location : Portland		Plan Name : September Projection - Portland				
Horizon : 9/2/2013 To 10/4/2013		Report : Planned Work Center Production Summary				
Assembly	9/2/2013	9/9/2013	9/16/2013	9/23/2013	9/30/2013	
Planned Production Units	560	150	590	710	0	0
Employees	1	2	1	1	0	0
Planned Labor Hours	69	18	73	88	0	0
Labor Hours Available	40	80	40	50	0	0
Planned Labor Utilization	172.5	22.5	182.5	176.0	0	0
Planned Machine Hours	69	18	73	88	0	0
Machine Hours Available	40	40	40	40	0	0
Planned Equipment Utilization	172.5	45.0	182.5	220.0	0	0

**Enhanced Work Order Management**

– IQity provides one consolidated view to access and perform all critical scheduling functionality improving effectiveness. With the use of real-time production results and color coding to denote work order status the production planner is able to make all the necessary decision to plan or re-plan to optimize customer service levels.

**Shop Floor Data Collection**

– IQity provides NetSuite users flexible and low cost shop floor data collection options. By using IQity’s integrated bar code scanning solution, wireless tablets or proprietary automated data collector, manufacturers are assured to have real-time schedule updates and insight into shop floor performance metrics, such as actual labor, downtime, scrap, quality and material usage transactions.
